Live Scanning Wand

Conducting what should be the simple act of inventory management using outdated RFID devices is time-consuming, labor-intensive and offers plenty of scope to introduce human error. Our job is to change all of that...
Thanks to the FE Technologies Live Scanning Wand (LSW) you can connect live to your ILS and eliminate the IT Department from the process entirely. Perfect for making optimal use of your resources the smart way.

Power On and Go

Because everything is ready the moment you power it on, delegating key tasks to experienced team members and staff has never been easier.

Live Integration with your ILS

The LSW connects live with your ILS allowing you to make changes to your database with ease, just the way you've always wanted to.

Live to ILS via Wi-Fi

Your new wand connects live to your ILS in real time via Wi-Fi. Not only does this make the process quicker and easier, it also makes it so much more accurate. Just what you want to hear when it's time to work the smart way.

Using your ILS Inventory System

Your new LSW also automatically updates the last seen date of any item so your inventory is always up to date and your patrons get more choice than ever before.

Multiple Profiles

When sharing a device between branches the Live Scanning Wand's multiple profiles remember key branch details. Want to move between branches? Take your kit with you and you're ready the moment you power it on.

Multiple Search Rules

Simultaneously search uploaded data from external systems to turn your wand into a powerful inventory device that never leaves anything to chance.

In Stack Processing

Never move items to be processed again thanks to a simple approach that allows you to work smarter, not harder, like never before.

8-hour battery life as standard

Perfect for working for an entire shift without any unwanted downtime.

18,000 items per hour

The LSW can scan up to 18,000 items an hour, greatly reducing the time required to complete repetitive inventory tasks while also improving accuracy. Please Note: RFID Accelerate requires the collection to be scanned at least once and the ILS responses must keep up to achieve these speeds.

Ergonomic design

Attach the tablet to any trolley thanks to the integrated clamp and use the wand all day without hand or wrist fatigue because it weighs a mere 15 oz. Perfect for a smart set of tools that will never let you down.
